PAPGA Provides Power Outage Safety Tips

Harrisburg, PA –In continuing efforts to keep Pennsylvania families safe, the Pennsylvania Propane Gas Association is highlighting the ‘Power Outage’ consumer safety module available at www.papropane.com

This easy-to-use online tool will walk you and your family through important steps to take before and during a power outage this winter. Some examples of these tips include:

- **Never use a power source or inspect an appliance while standing in water**
- **Never use a portable generator in an enclosed area, such as a basement, garage or tent**
- **Know how and where to turn off your Propane**

PAPGA recommends that homeowners schedule a time for a qualified service technician to perform a complete inspection after power returns. This service would include a leak test and re-lighting pilot lights. To find a professional in your neighborhood, log on to www.usepropane.com/find

“On behalf of all our marketer members across Pennsylvania, we hope these messages help families live safely and comfortably while managing their home energy”, said Dan Messett, Marketing Chair for PAPGA.

The Pennsylvania Propane Gas Association is a member-focused trade association providing services that communicate, educate and promote the propane industry in Pennsylvania. The association was formed in 1947 to offer opportunities to learn through training and networking with peers, and to aid with legislative issues that contribute to operating a safe and successful industry.
